SKILLS

Programming & Libraries: Python, SQL, JavaScript, Pandas, NumPy, Scikit-learn, TensorFlow, Keras, PyTorch, Matplotlib, Seaborn

ML / AI Techniques: Neural Networks (CNN, RNN), Random Forest, Feature Engineering, Cross-Validation, ROC-AUC

AI & Generative Tools: LLM APIs (OpenAI, Claude), Prompt Engineering

Data & Dev Tools: Tableau, Power BI, Git, GitHub, Jupyter Notebook, Google Colab, Linux, MacOS

EXPERIENCE

AI-ML Intern — AICTE NEAT Cell

Jan 2024 – Mar 2024

- Developed an object detection pipeline using TensorFlow/Keras and **YOLO** on Google's Open Images dataset, detecting real-world objects (people, vehicles, animals) to power an AI-based educational tool aimed at demonstrating computer vision concepts to students.
- Processed and analyzed **20,000+** records from AICTE's technical education and skill-development datasets, performing end-to-end data cleaning (null imputation, deduplication, standardization) and EDA using Python (Pandas, NumPy, Matplotlib, Seaborn) to identify enrollment trends and prepare data for AI-ML model development.
- Conducted in-depth exploratory data analysis using **Python** (Pandas, NumPy, Matplotlib, Seaborn) to uncover **patterns, trends, and outliers**, generating actionable insights that informed modeling decisions.
- Assisted in **developing, training, and evaluating** machine learning models for classification tasks contributing to model selection, hyperparameter tuning, and cross-validation to assess generalizability.
- Enhanced** model performance through systematic feature engineering including encoding categorical variables, scaling numerical features, and creating derived features resulting in measurable improvements in **classification accuracy**.
- Automated data validation, transformation, and report-generation workflows using modular Python scripts, reducing manual processing time by **30%** and enabling faster iteration across multiple dataset versions.

PROJECTS

FurInsight – Pet Disease Prediction System | ML Project, Course Project

- Developed an AI-powered pet disease prediction system on **2,000+** veterinary records (**14 features**); integrated an OpenAI API chatbot to explain diagnosed conditions to pet owners in plain English and also filed a **copyright**.
- Built and compared **ML models (Random Forest, Decision Trees, Naive Bayes)**, selecting Random Forest which achieved **87% prediction accuracy** and improved performance by **15% through feature selection and optimized preprocessing techniques**.

Customer Churn Prediction | ML Project

- Developed a customer churn prediction system using **customer records**, performing data cleaning, preprocessing, and feature engineering to prepare structured data for machine learning models. Trained and evaluated **multiple models including Random Forest and Logistic Regression**, selecting the most effective model which achieved **82% prediction accuracy** based on standard evaluation metrics.

EV Charging Station Data Analysis | Data Analytics Project

- Analyzed **over 25,000 EV charging session records** using **Python** and **Pandas**, identifying **usage patterns**, determining **peak charging hours**, uncovering **station demand trends** across multiple regions to provide a detailed understanding of charging behavior. Performed comprehensive **data cleaning, preprocessing, and exploratory data analysis (EDA)**, which revealed **station utilization rates**, highlighted **regional variations in charging demand**, and generated actionable insights for optimizing EV infrastructure.

EDUCATION

Master of Science, Data Science, University of Wisconsin–Milwaukee

May 2027

Relevant Coursework: Machine Learning, Statistical Data Analysis, Big Data Analytics, Data Mining, Deep Learning, Data Visualization, Database Management

Bachelor of Science in Computer Science, Savitribai Phule Pune University

May 2025

Relevant Coursework: Data Structures & Algorithms, Human Computer Interaction, Statistics & Probability
